SUPER-SAFEWAY® INCANDESCENT LIGHTING

CONSTRUCTED FOR RUGGED, RELIABLE SERVICE IN A WIDE RANGE OF INDUSTRIAL APPLICATIONS

Daniel Woodhead's extensive line of incandescent hand lamps and stringlights is renowned for its heavy-duty construction and long operating life in industrial applications of all types. Woodhead incandescent hand lamps are built to endure years of rigorous use and feature easy-to-replace parts for quick, convenient serviceability.

It's the design and construction details that set Woodhead incandescent lights apart. For enhanced durability, heavy-duty #8 gauge zinc-plated guards and thick NEõTEX® rubber or phenolic plastic handles protect bulbs and electrical components. Handles are ergonomically designed to protect users from accidentally touching the hot steel guard.

Incandescent hand lamps from Daniel Woodhead are available in many configurations and can be modified to accommodate specific applications and users' preferences. They can be easily set up for 12- to 240-Volts, simply by selection of appropriate bulb and plug.

For lighting enclosed areas such as tunnels, passageways and marine vessels, Woodhead offers versatile incandescent stringlights that can be suspended or laid in place.

75-100 WATT HAND LAMP WITH RUBBER HANDLE AND GROUNDED STEEL GUARD

75-100 Watt Guards — Closed End

			Guard #	1152	1156	1162	1166	1168
